

Reduce!

Recycle!

## Creating a Healthier Tomorrow

By: Ella Mueller  
Peace Lutheran School  
Fourth Grade

There are many ways to keep God's earth healthy for a better tomorrow.

The first way is by trying to reduce, reuse, and recycle. We can reduce space by crushing aluminum cans, and reduce the use of our natural resources by turning off lights, water, limiting electronic use, and by riding your bike to work, school, or wherever your destination is instead of driving a vehicle. We can also think of some ways to reuse trash by using it more than once and by using reusable products such as a cloth bag to store groceries. When you don't finish your food at a restaurant, don't waste it and throw it all away! Instead, ask for a box to take home so that you can eat it later. Recycle aluminum cans, paper, glass and plastic products by putting them in the recycling bins.

If you see someone vandalizing or littering, you should speak up and tell them that they are damaging and ruining God's earth.

You shouldn't litter because if any animals would eat it, they could get very sick or even die. By picking up our trash, we are respecting God's animals and His creations.

Lastly, we can plant trees to provide shade, produce fresh air around us, and to use their branches for fires and to build homes. Some trees can also provide fruit for us to eat. On Earth Day or on any day, you should go outside to pick up trash to help the environment and to make God's earth a healthier and better place.

Reuse!
